***Allowable Subject Matter***

1. Claims 1 and 2 are allowed.
2. The following is an examiner's statement of reasons for allowance: The deformed wire for reinforcing submarine optical fiber cable characterized by a defined alloy composition with a ferrite-pearlite or pearlite structure, having a number of shear bands cutting across a L-section center axial line (shear bands having inclination with respect to rolling direction) of 20/mm per unit length of the centre- axis, having an angle formed by the center axis and shear bands in the range of 10 to 90 degrees, having a tensile strength of 1800 MPa or more, having a sectional area forming an approximately fan shape, a plurality of the approximately fan shapes being combined to form a circular hollow cross-section for accommodating optical fibers, having at its surface a pebbled surface comprised of relief shapes of depths of 0.2 to 5 m, and having a weld at least at one location in the longitudinal direction, as recited by claims 1 and 2 is not taught or fairly suggested by the art of record.
3. In addition, claim 2 further recites a deformed steel wire having Si segregated so as to satisfy a Si maximum segregation degree of the cementite / ferrite interface in the range of 30 nm to ferrite phase side from the cementite and ferrite interface of the pearlite structure (maximum Si concentration/Si content of bulk in the range of 30 nm to ferrite phase side from cementite and ferrite interface)  $\geq 1.1$ , which is not taught or suggested by the art of record.
4. Applicants discovered that a fan-shaped deformed wire having increased tensile strength without breaks during working can be achieved by controlling the shear bands

Art Unit: 1793

generated during working having inclination with respect to the rolling direction in the range of 10 to 90 degrees and having a number of shear bands cutting across an L-section center axial line of 20 / mm per unit length of the center axis,. Also breaks can be further prevented during deformed working by controlling the Si content between 0.5 to 1.5% and controlling Si content so as to satisfy the claimed Si maximum segregation degree to  $\geq 1.1$ , breaks. The claimed limitations are critical and productive of new and unexpected results, as shown on pages 8 to 12, tables 1 to 6 and figures 2 to 7 of Applicants' specification.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is 571-272-1253. The examiner can normally be reached on monday-friday 6:00 am-2:30 pm.
